

Daylight by Design

Indoor Sky is dedicated to developing products to optimize both occupant comfort and energy performance through daylight harvesting in markets such as education, healthcare, retail and commercial office.

Unlike conventional interior shading systems, the Daylitter Shade provides ideal interior daylight levels while minimizing glare and solar heat gain. Featuring fabric lightshelf assemblies with integrated roller shades, the Daylitter Shade overcomes the shortcomings associated with conventional lightshelves while maintaining their energy reduction benefits.

Shades may be manually operated or fully automated.

Denver Cunningham Group Architecture

Studio renovation designed for ultimate daylighting.

The 22 foot high open beam ceiling in this refurbished studio, complete with diffused skylight, demanded a window treatment that could anchor the space aesthetically.

Each large window showcases a Dayliter Shade with triple, operable lightshelf to take advantage of the ever changing daylight. The southern tree lined facade creates shadows that play on the shades in the breeze. "We love these shades and so does everyone who comes in here," expounded Paul Hutton managing partner.
